## SHREWSBURY SCHOOL

# SIXTH FORM ENTRANCE EXAMINATION 2021

### **BIOLOGY**

(Time: I Hour)

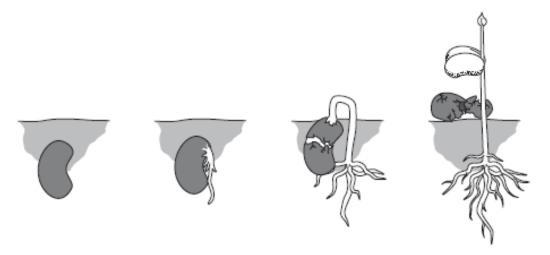

#### **Instructions to candidates:**

- Please answer all questions. Calculators may be used.
- Questions I-40 are multiple choice: record your answers in the grid provided.
- Be sure to leave about 20 minutes for questions 41 and 42: these should be answered in the spaces provided in the booklet.

## Multiple choice answers

I	11	21	31
2	12	22	32
3	13	23	33
4	14	24	34
5	15	25	35
6	16	26	36
7	17	27	37
8	18	28	38
9	19	29	39
10	20	30	40

1 The diagram shows how a seed changes after it is planted in well-watered soil.

Which characteristics of living things are demonstrated by this sequence?

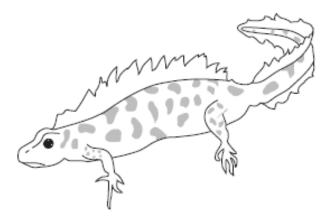

- A growth and reproduction
- B growth and sensitivity
- C nutrition and reproduction
- D nutrition and sensitivity
- 2 The diagram shows the body plan of an invertebrate animal.

To which group does the animal belong?

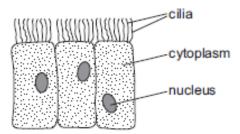

- A annelid
- B crustacean
- C insect
- D nematode

#### 3 The diagram shows an animal.

Use the key to identify the animal.

- 4 The diagram shows some cells.

Where are these cells found?

- A alimentary canal
- B blood
- C bronchial wall
- D plant roots

5 Which features are possessed by all plant cells?

	a cell wall	chloroplasts
Α	✓	✓
В	✓	x
С	X	✓
D	×	×

- 6 For which process is a root hair cell adapted?
  - A absorption of mineral ions
  - B support of stem
  - C translocation of sucrose
  - D transport of oxygen

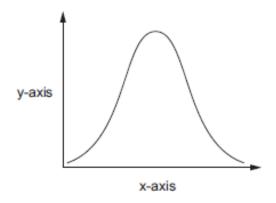

7 Which processes produce a continuous space for the flow of water in xylem vessels?

	break down of the cell walls between adjacent cells	removal of the cytoplasm in each cell
Α	yes	yes
В	yes	no
С	no	yes
D	no	no

8 Which characteristics are correct for both osmosis and diffusion?

	require a partially permeable membrane	require a concentration gradient	are energy consuming processes
Α	✓	✓	x
В	✓	×	✓
С	x	✓	x
D	X	x	✓

- 9 Which substance is transported by haemoglobin?
  - A nitrogen
  - B oxygen
  - C urea
  - D water
- 10 What happens to most enzymes above 60 °C?
  - A They are denatured.
  - B They are destroyed by white blood cells.
  - C They are digested.
  - D They are made more active.
- 11 An experiment was carried out to investigate the effect of pH on enzyme action. The graph shows the results.

What are the labels for the x-axis and the y-axis?

	x-axis	y-axis
Α	pН	rate of reaction
В	pН	time
С	rate of reaction	pН
D	time	pН

12	What is the function of the anus?			
	Α	assimilation		
	В	digestion		
	С	egestion		
	D	excretion		
13	Wh	ich simple molecules are the basic units of protein? amino acids		
	В	fatty acids		
	С	sugars		
	D	vitamins		
14		me liquid is collected from the xylem in the stem of a plant.		
	Wh	What is present in the liquid?		
	Α	cellulose		
	В	inorganic ions		
	С	starch		
	D	sugar		
15	Wh	at is a function of phloem?		
	A	translocation		
	В	transpiration		
	С	storage of food		
	D	support		

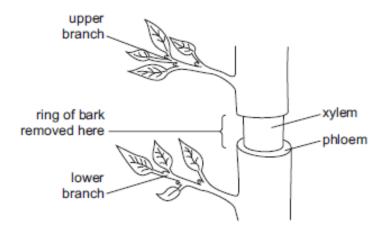

16 The diagram shows human blood as seen through a light microscope.

A person's blood is unable to clot.

Which component of the blood is not functioning properly?

17 The diagram shows part of the trunk of a small tree with a ring of bark removed. Removing the ring of bark takes away phloem but leaves the xylem intact.

What effect will removing the bark have on the two branches?

	lower branch		upper	branch
	growth	leaves	growth	leaves
Α	normal	normal	normal	wilted
В	normal	wilted	normal	normal
С	reduced	normal	normal	normal
D	reduced	wilted	reduced	wilted

	С	lactic acid and carbon dioxide
	D	lactic acid only
	_	
19	The	oxygen carrying capacity of the blood of smokers is less than that of non-smokers.
	Whi	ch component of cigarette smoke causes this?
	A	carbon monoxide
	В	nicotine
	С	smoke particles
	D	tar
20	Why	is yeast used in bread-making?
	Α	to provide carbon dioxide
	В	to provide ethanol
	С	to provide lactic acid
	D	to provide oxygen

18 What are the products of anaerobic respiration in muscles?

A ethanol and carbon dioxide

B ethanol only

21 The table shows a student's water losses on a cool day.

	water loss /cm³
in urine	1500
in faeces	100
in expired air	400
in sweat	800
total	2800

On a hot day the student's water intake was the same as on the cool day.

On the hot day, which water losses would increase and which would decrease?

	increase	decrease
A	in sweat	in expired air
В	in sweat	in urine
С	in urine	in faeces
D	in urine	in sweat

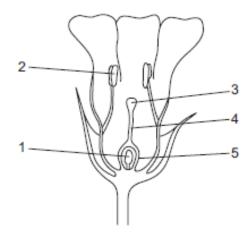

22 After a meal containing carbohydrates, which row shows the changes in concentration of glucose and urea in the blood as it passes through the liver?

	glucose	urea
Α	less	less
В	less	more
С	more	less
D	more	more

23 Which actions straighten the arm at the elbow joint?

	biceps	triceps
A	contracts	contracts
В	contracts	relaxes
С	relaxes	contracts
D	relaxes	relaxes

- 24 Which response is a result of geotropism?
  - A flowers being produced
  - B growing bigger leaves
  - C roots growing downwards
  - D seeds germinating
- 25 The diagram shows a flower in vertical section.

Which numbered parts of the flower continue to develop after fertilisation?

- A 1 and 5
- B 2 and 4
- C 3 and 5
- D 4 and 5
- 26 A plant has two different alleles of a gene resulting in it having a green seed.

Which row describes the phenotype and genotype of the seeds of this plant?

	phenotype	genotype	
Α	Gg	heterozygous	
В	Gg	homozygous	
С	green	heterozygous	
D	green	homozygous	

27 To avoid extinction of a rare plant species, a botanical garden keeps a collection of seeds, known as a seed bank.

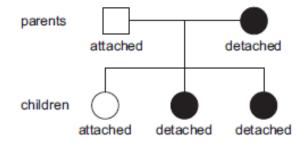

Which condition will prevent these seeds germinating whilst in storage?

- A high humidity
- B high oxygen levels
- C low light intensity
- D low temperature

- 28 What may be defined as 'an increase in dry mass'?
  - A growth
  - B nutrition
  - C reproduction
  - D respiration
- 29 The shape of a person's earlobes is determined by a single gene. This gene has dominant and recessive alleles.

The allele for detached earlobes is dominant to the allele for attached earlobes.

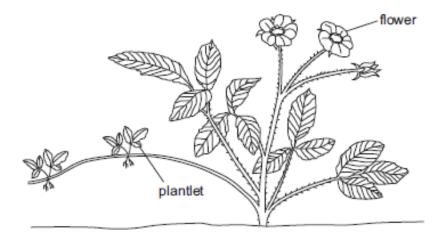

The diagram shows the inheritance of earlobe shape in a family.

What is the probability of the next child from the same parents having detached earlobes?

- A 0%
- B 25%
- C 50%
- D 75%
- 30 Which sex chromosomes are present in all mature human sperm cells?
  - A both X and Y chromosomes
  - B either X or Y chromosomes
  - C only X chromosomes
  - D only Y chromosomes

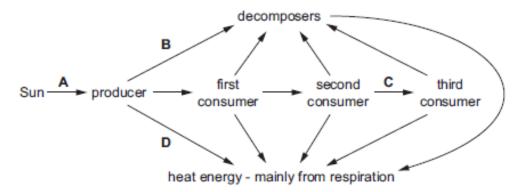

31 The diagram shows a plant that is producing small plantlets.

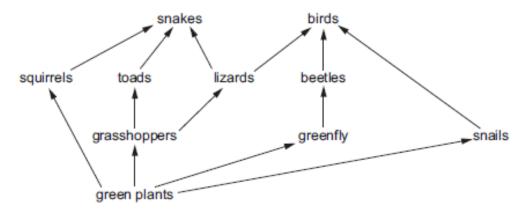

Which statement about the plantlets is correct?

- A They are genetically different from the parent plant.
- B They are genetically identical to the parent plant.
- C They are produced as a result of the fusion of nuclei.
- D They are produced by fertilising the flowers.
- 32 The diagram shows energy passing through an ecosystem.

Which arrow shows energy leaving the food web?

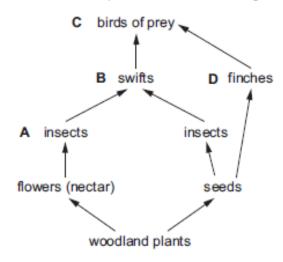

33 The diagram shows a food web.

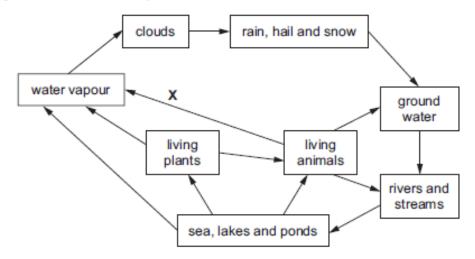

Which organisms will increase in number, if the number of snakes increases?

- A birds
- B grasshoppers
- C lizards
- D squirrels
- 34 The diagram shows some feeding relationships in a woodland area.

Which of the labelled animals are in competition with seed-eating insects for their food?

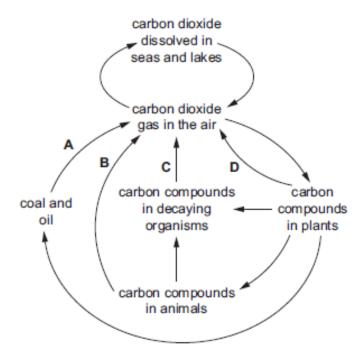

35 The diagram shows the water cycle.

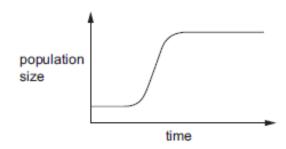

Which process is represented by X?

- A osmosis
- B photosynthesis
- C respiration
- D transpiration
- 36 The diagram shows the carbon cycle.

Which process produces carbon dioxide from substances made by photosynthesis millions of years ago?

37 The graph shows part of a growth curve for a bacterial population.

What is missing from the graph?

- A the death phase
- B the exponential phase
- C the lag phase
- D the stationary phase
- 38 Over-use of fertilisers on farmland causes the chemicals in the fertilisers to be washed into ponds and lakes.

This causes eutrophication resulting in the following events.

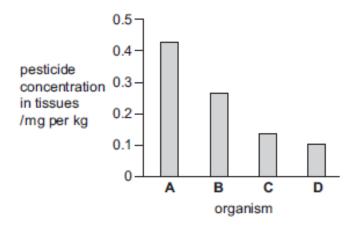

- 1 algae grow
- 2 fish die
- 3 bacteria grow
- 4 oxygen decreases

What is the correct sequence of these events?

- A  $1 \rightarrow 3 \rightarrow 4 \rightarrow 2$
- **B**  $1 \rightarrow 4 \rightarrow 3 \rightarrow 2$
- C  $3 \rightarrow 4 \rightarrow 2 \rightarrow 1$
- D  $4 \rightarrow 1 \rightarrow 2 \rightarrow 3$

39 The concentration of a pesticide in the tissues of the organisms in the following food chain was measured.

Which bar on the chart represents the large fish?

- 40 Which activity will be least likely to lead to the extinction of species?
  - A conservation
  - B deforestation
  - C use of herbicides
  - D use of pesticides

<b>41.</b> Describe how you would carry out an experiment to investigate the effect of seawater temperature on the growth of coral. [5]				

.....

**42.** Managers at a sewage treatment plant were worried about a possible leak that might be causing pollution. They hired an ecologist to survey three streams nearby. The ecologist gathered the following data on the number of organisms at each site:

Organism	Site 1	Site 2	Site 3
Freshwater shrimp	67	20	5
Freshwater mite	4	15	1
Flat mayfly	23	21	0
Bighead stonefly	12	18	2
Blackfly	76	40	100
Bloodworm	21	22	43

a. To make the data valid the ecologist was careful to sample the streams fairly. Give two examples of controlled variables in this investigation. [2]
b. The ecologist decided that one of the three sites was showing signs of pollution. Which site did they identify, and why? [2]
c. "Bloodworm" is the common name for the larva (maggot) of a midge (a small fly). It has its name because it contains haemoglobin, which is unusual for an insect. Given the information in the table and your conclusions above, explain why bloodworms are most common in site 3. [1]
